

1 ModPerl::MM -- A "subclass" of ExtUtils::MakeMaker for mod_perl 2.0

1.1 Synopsis

```

use ModPerl::MM;

# ModPerl::MM takes care of doing all the dirty job of overriding
ModPerl::MM::WriteMakefile(...);

# if there is a need to extend the default methods
sub MY::constants {
    my $self = shift;
    $self->ModPerl::MM::MY::constants;
    # do something else;
}

# or prevent overriding completely
sub MY::constants { shift->MM::constants(@_); };

# override the default value of WriteMakefile's attribute
my $extra_inc = "/foo/include";
ModPerl::MM::WriteMakefile(
    ...
    INC => $extra_inc,
    ...
);

# extend the default value of WriteMakefile's attribute
my $extra_inc = "/foo/include";
ModPerl::MM::WriteMakefile(
    ...
    INC => join " ", $extra_inc, ModPerl::MM::get_def_opt('INC'),
    ...
);

```

1.2 Description

ModPerl::MM is a "subclass" of ExtUtils::MakeMaker for mod_perl 2.0, to a degree of sub-classability of ExtUtils::MakeMaker.

When ModPerl::MM::WriteMakefile() is used instead of ExtUtils::MakeMaker::WriteMakefile(), ModPerl::MM overrides several ExtUtils::MakeMaker methods behind the scenes and supplies default WriteMakefile() arguments adjusted for mod_perl 2.0 build. It's written in such a way so that normally 3rd party module developers for mod_perl 2.0, don't need to mess with *Makefile.PL* at all.

1.3 MY::: Default Methods

ModPerl::MM overrides method *foo* as long as *Makefile.PL* hasn't already specified a method *MY::foo*. If the latter happens, ModPerl::MM will DWIM and do nothing.

In case the functionality of `ModPerl::MM` methods needs to be extended, rather than completely overridden, the `ModPerl::MM` methods can be called internally. For example if you need to modify constants in addition to the modifications applied by `ModPerl::MM::MY::constants`, call the `ModPerl::MM::MY::constants` method (notice that it resides in the package `ModPerl::MM::MY` and not `ModPerl::MM`), then do your extra manipulations on constants:

```
# if there is a need to extend the methods
sub MY::constants {
    my $self = shift;
    $self->ModPerl::MM::MY::constants;
    # do something else;
}
```

In certain cases a developers may want to prevent from `ModPerl::MM` to override certain methods. In that case an explicit override in *Makefile.PL* will do the job. For example if you don't want the `constants()` method to be overridden by `ModPerl::MM`, add to your *Makefile.PL*:

```
sub MY::constants { shift->MM::constants(@_); };
```

`ModPerl::MM` overrides the following methods:

1.3.1 ModPerl::MM::MY::post_initialize

This method is deprecated.

1.4 WriteMakefile() Default Arguments

`ModPerl::MM::WriteMakefile` supplies default arguments such as `INC` and `TYPEMAPS` unless they weren't passed to `ModPerl::MM::WriteMakefile` from *Makefile.PL*.

If the default values aren't satisfying these should be overridden in *Makefile.PL*. For example to supply an empty `INC`, explicitly set the argument in *Makefile.PL*.

```
ModPerl::MM::WriteMakefile(
    ...
    INC => '',
    ...
);
```

If instead of fully overriding the default arguments, you want to extend or modify them, they can be retrieved using the `ModPerl::MM::get_def_opt()` function. The following example appends an extra value to the default `INC` attribute:

```
my $extra_inc = "/foo/include";
ModPerl::MM::WriteMakefile(
    ...
    INC => join " ", $extra_inc, ModPerl::MM::get_def_opt('INC'),
    ...
);
```

ModPerl::MM supplies default values for the following ModPerl::MM::WriteMakefile attributes:

1.4.1 CCFLAGS

1.4.2 LIBS

1.4.3 INC

1.4.4 OPTIMIZE

1.4.5 LDDLFLAGS

1.4.6 TYPEMAPS

1.4.7 dynamic_lib

1.4.7.1 OTHERLDFLAGS

```
dynamic_lib => { OTHERLDFLAGS => ... }
```

1.4.8 macro

1.4.8.1 MOD_INSTALL

```
macro => { MOD_INSTALL => ... }
```

makes sure that Apache-Test/ is added to @INC.

1.5 Public API

The following functions are a part of the public API. They are described elsewhere in this document.

1.5.1 WriteMakefile()

```
ModPerl::MM::WriteMakefile(...);
```

1.5.2 get_def_opt()

```
my $def_val = ModPerl::MM::get_def_opt($key);
```
