You may not want to touch this one, but adultad.com contracted me to fix their adult banner exchange to where it could throw more than 1.5 banners a second. I put it under mod_perl, and it now tops out at slightly over 20 banners per second. It is now throwing approximately 10 Million banners a week solid without a problem. The banner exchange (both banner throwing/logging and click-thru redirection/logging) is running 100% under mod_perl.
