Singles Heaven - <http://singlesheaven.com> is a Match Maker site with 34,000+ members and growing. The site is driven by mod_perl, DBI, Apache::DBI (which provides a persistence to DB connections) and mysql. The speed is enormous, chatting with mod_perl is a pleasure of experience. Every page is being generated by about 10 SQL queries, for it does many dynamic checks every time - like checking for new emails, watching the users who registered in their watchdog and many more. You don't feel these queries are actually happen, the speed is of the ``Hello World'' script.

Development path was very short, I have converted plain CGI scripts to run under mod_perl (Apache::Registry) almost in no time!!! If you are into a database driven service, give mod_perl a try !!!
