- Traffic: 50,000 pages/day
- URL: <http://www.bivio.com>

bivio.com is a web-delivered application written entirely in perl which provides complete accounting, tax preparation, automatic downloads of broker transactions, message boards, file sharing, email aliases, and more. Apache/mod_perl on Linux has functioned incredibly reliably with +99% uptime.

Our declarative MVCF application framework (250 perl classes) is available under the Artistic License from <http://www.bivio.net> This includes a demo application <http://petshop.bivio.net> which is a more concise implementation of J2EE's Blueprint Architecture.
