- Traffic: 4 million pageviews / month
- URL: <http://www.find-job.net>

Find Job! <http://www.find-job.net> is the biggest computer and Internet related employment site in Japan, and it is running on mod_perl completely. We have around 75,000 registered users and 10,000 registered companies. Our pageviews are around 4 million per month. Our whole system was running under plain CGI written in Perl, until recently we changed it to mod_perl ModPerl::PerlRun with HTML::Template templating system. On some scripts we saw up to 400% of speed improvement, and total CPU load average went down around 50%. The change from mod_cgi to mod_perl ModPerl::PerlRun itself was painless at all.

Right now we are working on our scripts, to make it mod_perl ModPerl::Registry compatible. We are going to run our site on mod_perl ModPerl::Registry once it is finished, and hope to see some more speed improvement.
